

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently amended) Plumbing spout device (4) comprising a mounting sleeve (7) having an external thread, which is connected to a water spout, having an internal thread, of a plumbing water spout fitment (1) via a screw connection, and a flow rectifying device (5), with an attachment screen (6) being connected upstream of the flow rectifying device in a direction of flow, and a housing neck (8) connected downstream of the flow rectifying device (5) on the outlet end of the spout device (4) is provided for forming a jet. the flow rectifying device (5) being provided as a perforated plate and having a perforated area at least in a partial region thereof, an outflow-side of the flow rectifying device (5) is arranged at an outlet of the mounting sleeve (7) and the flow rectifying device (5) is integral with the mounting sleeve (7), the spout device (4) has a contoured outer end face tool attachment surface projecting beyond the thread in the outlet direction for a tool insert.

2. (Previously presented) Spout device according to claim 1, wherein a screen-like or grating-like insert part or functional element is connected between the attachment screen (6) and the flow rectifying device (5).

3. (Previously presented) Spout device according to claim 1, wherein the attachment screen (6) is connected directly upstream of the flow rectifying device (5) without an intermediate connection of other installation parts or functional units.

4. (Cancelled)
5. (Previously Presented) Spout device according to claim 1, wherein a throughput regulator or a throughput limiter is connected upstream of the attachment screen (6) in the direction of flow.
6. (Previously presented) Spout device according to claim 1, wherein the attachment screen (6) directly contacts a supply side of the flow rectifying device (5) at least with an outer edge region thereof.
7. (Previously Presented) Spout device according to claim 1, wherein the attachment screen (6) has a conical shape.
8. (Cancelled)
9. (Previously presented) Spout device according to claim 1, wherein the flow rectifying device (5) is connected to the mounting sleeve (7) via a weld, adhesive, clip, or screw connection.
10. (Cancelled)
11. (Previously Presented) Spout device according to claim 1, wherein the outflow end side of a spout device has contouring formed from end-edge projections and recesses, such that the recesses of the spout device held in a spout fitment are used as tool attachment surfaces for the projections of another spout device that can be used as a tool insert.

12. (Previously presented) Spout device according to claim 1, wherein the perforated area of the flow rectifying device formed as the perforated plate has a honeycomb-like structure.

13. (Previously presented) Spout device according to claim 1, wherein the perforated area of the flow rectifying device is divided by approximately radial longitudinal walls and approximately concentric peripheral walls into approximately circular segment-like throughput holes.

14. (Previously Presented) Spout device according to claim 1, wherein the spout device is embodied as a jet regulator, jet disrupter, or flow straightener.
